Search functionality

Funnelback for Associations is built upon best practices developed from working closely with global associations and UX experts.

The out-of-the-box template makes it easy for you to give your visitors modern search features that match the look and feel of your website and make immediate use of your content. Funnelback for Associations boosts member satisfaction by delivering smarter, more personalized search results without requiring extensive customization. Integrate your search results with secure content, promotions, social media, videos and more. Engage, onboard and deepen your member relationships today.

Background: A generic search engine result page (SERP)

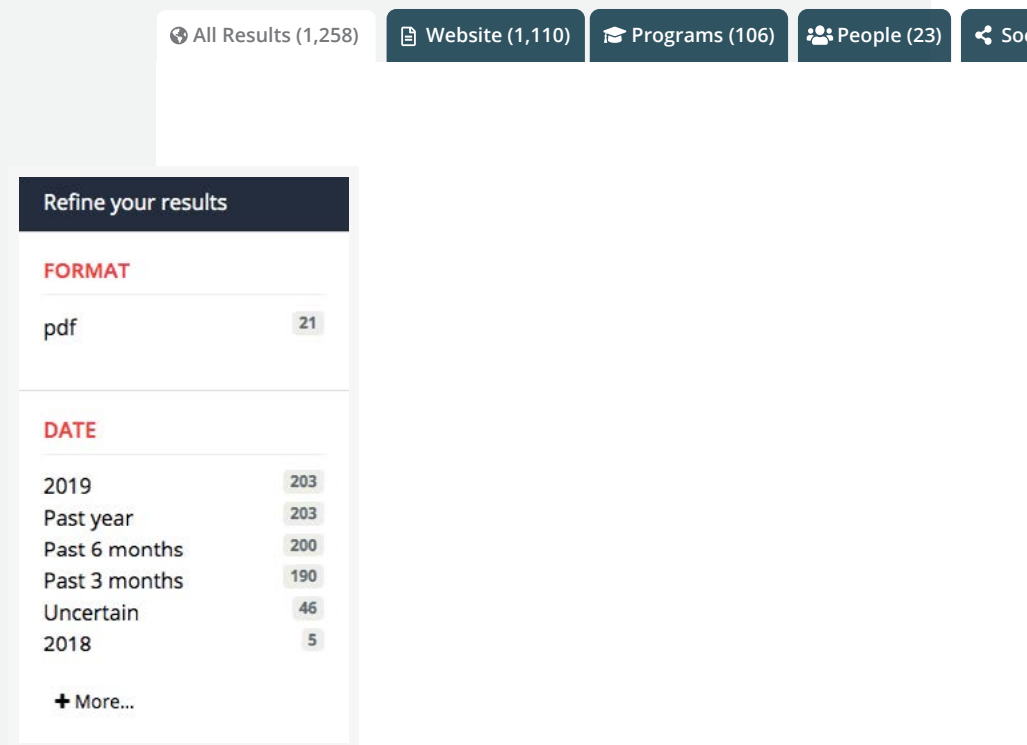

Foreground: Funnelback for Associations SERP with faceted navigation and customized result summaries..

SEARCH FUNCTIONALITY

Faceted navigation

Help your users to narrow down their search results. Funnelback dynamically generates the most relevant filters for your user: for example, filtering by file type, date, category, and audience. This helps your users find their answer the first time, reducing “second searches” (search refinements).

These facets can be customized based on your content and the needs of your audience.

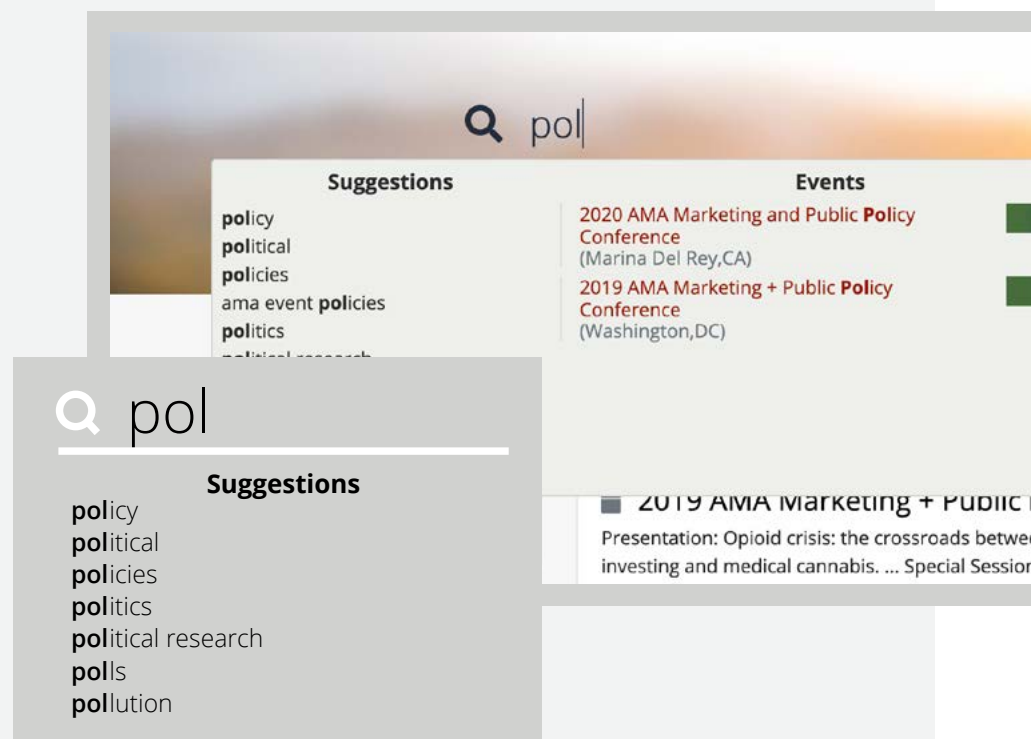

Faceted navigation refers to an advanced search interface which filters content into file type, date, category and audience.

SEARCH FUNCTIONALITY

Concierge

Funnelback AI predicts the full search term and the most relevant content as your user types their query, enabling discovery across content the user may not even know exists. With just a few keystrokes, autosuggest surfaces content that is most important to the member or prospect.

This also offers an opportunity to drive traffic to high-value content, like Classes or Events, without requiring that the user ever visit the results page.

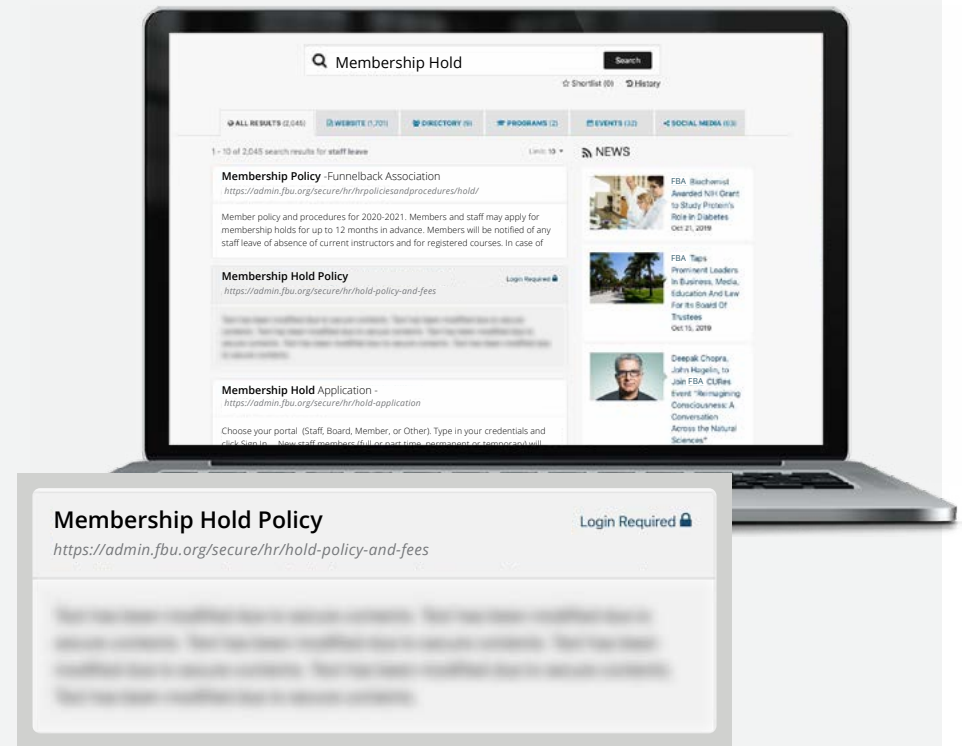

Concierge is a sophisticated autocomplete that also instantly presents content by category relevant to higher education audiences.

SEARCH FUNCTIONALITY

Members-only search

Do members struggle to find members-only content or specific resources? Highlight your valuable content by searching secure or members-only content with Funnelback Translucent Search technology. Logged-in members can see a “Members only” tag, while those logged out will see a blurred result and reminder to log in, underlining the value of membership.

Bridge the gap between public and private content with Translucent Search. Before they're prompted to join, members get a hint of what they're missing.

Translucent search allows members-only or gated content to appear blurred in search results, prompting users to log in.

SEARCH FUNCTIONALITY

Custom result summaries

In the modern web, search result summaries need to provide more than a headline. Adding supplementary information like a date, member type or content format will help the users navigate to the right content.

Funnelback for Associations supports rich context like images within search results to provide a captivating, highly relevant multimedia results page.

Custom result summaries allow your team to choose what populates as the featured text in a search result.

SEARCH FUNCTIONALITY

Saved searches/shortlist

Your content library can at times prove overwhelming. Let members select just the content they need in a shopping cart-like environment. Instead of opening hundreds of tabs, they can review and peruse this content later within their 'cart' or print out a summary prospectus. Saved searches make it easy for visitors pick up where they left off from a previous search session.

Combined with a visitor's search history, saved searches can also be used as an additional tool to personalize your offering to members or prospects.

Shortlist lets visitors save search results they want to view later.

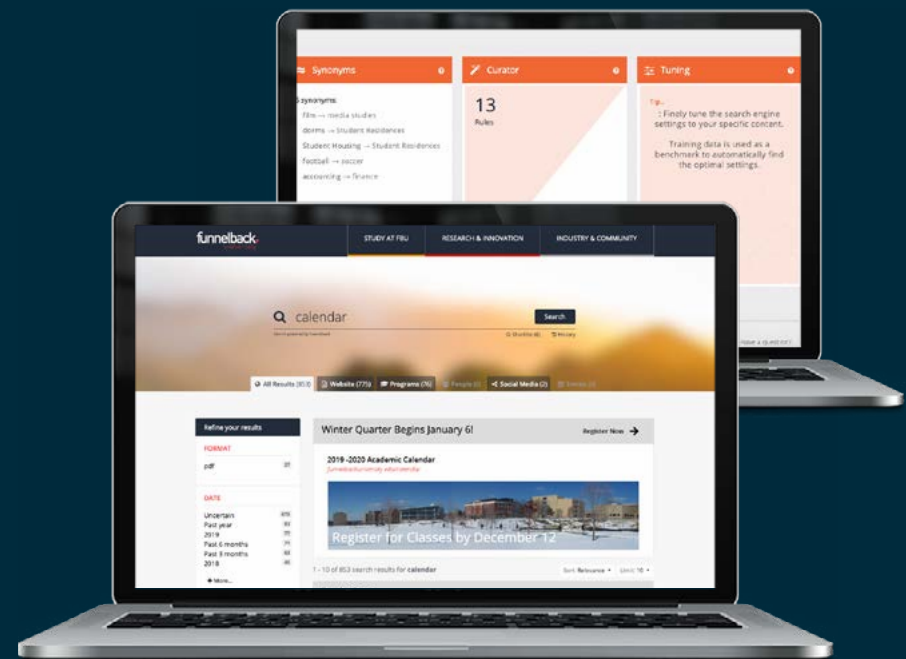

Saved searches let visitors pick up where they left off from a previous search session.

Search control

Funnelback for Associations allows your technical and non-technical users alike to take complete control over your search, from result ranking to the content and context users see when they input a specific query.

Learn more about how the American College of Physicians (a membership organization) took control of their search at:

Search curation: Funnelback for Associations search results page with a promoted result calling out important dates.

SEARCH CONTROL

Curator

Your campaigns run across your digital properties, websites, at events and elsewhere. Do they extend to search, often one of the key points of entry for members? With Funnelback curator, elevate particular messages, promotions or results within your search page.

Drive traffic to the most relevant content and streamline the user experience by creating and customizing rules, triggers, and the visual appearance of search results. Guide the user's search journey by promoting or modifying search results so users find the most relevant content quickly.

SEARCH CONTROL

Synonyms

Resolve terminology differences between internal jargon and external audiences. For example, linking “careers” to “jobs” ensures the most relevant results for a query with the same intent.

SEARCH CONTROL

Tuning

Out-the-box, Funnelback for Associations will order search results optimally for most Associations, up-weighting certain categories like events. But your team can go further. Funnelback Training will retrain the Funnelback search algorithm with ideal results according to your preferences. Indicate which content or formats are most relevant to a particular search term and our AI solution will adjust the ranking to closely match your preferred set.
